

PHILIPP Compact anchor in a revised version

Today you receive a delivery with PHILIPP Compact anchors (ref.-no.: 67K... resp. 75K...VA), which is different to previous supplies. Now, Compact anchors are produced and delivered with a plain bar instead of a ribbed reinforcing bar. This is done successively for all available sizes (RD12 – RD52) from now on. Compact anchors of the sizes RD16, RD20 and RD24 have been produced already for some time in this version.

The processing of a plain bar has no effect on the installation and application in reinforced concrete precast elements.

All dimensions and load bearing capacities remain unaffected.

Please feel free to contact our engineer team with any further questions.
