

PHILIPP Plastic sealing cap for KHN System

PHILIPPGROUP

With the addition of a custom-made, conical plastic sealing cap for the entire threaded transport anchor system PHILIPP completes the product choice of caps. The new, concrete-grey plastic cap offers a fast and long-lasting closing of all recesses of the KHN System (Lifty). Here, only four types cover the complete range of this system (RD12 – RD52).

- Suitable for the complete threaded transport anchor system (also Power System SL)
- Surface-flush and visually attractive closing of the recesses
- Lower storage costs due to a variable range of applications
- One type suitable for several thread sizes (see Pictures)
- Well-priced alternative to stainless steel sealing caps

Please feel free to contact our engineer team with any further questions.
