PHILIPP PB ANCHOR

NEW

PRODUCTS FOR FIXATION

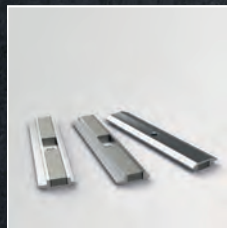

PB anchor

These approved, heavy-duty threaded anchors in five dimensions (RD12-30) can be used for all applications where load-bearing constructions shall be fixed to precast or cast-in situ concrete elements. No matter whether in un/reinforced and un/cracked concrete the PB anchor transfers tension and shear forces as well as combinations of them safely and durably.

Magnetic fastener for connecting rails

These special magnets are ideal for the easy fixation of our Connecting rails with wire ropes to steel formwork, independently if you use high-strength rails or simple constructive connections. A correction of the position at the steel formwork is always possible, there is no need to remove waste from hot bonding.

Magnetic fastener for anchor channels

The easy-to-handle and strong magnets fix cast-in anchor channels to steel formwork easily. Here, these are pressed into the foam of the profile opening and thus anchor themselves under the rail lips. An easy positioning on the formwork without hot bonding, no need to remove residual glue.

PRODUCTS FOR TRANSPORT

Compact anchor Version: short

Compact anchors in the short version are a perfect solution for applications in extremely thin slab-like elements, because of the short embedment depth. Significantly smaller edge and centre distances allow a higher flexibility in the planning of lifting anchors.

Capped end anchor Version: long

The longer version of the standard Capped end anchor enables the use of straight reinforcement and results in an easier and cheaper installation. Still a high performance anchor but with an efficient installation, no time-consuming bending of rebars and less requirements for space.

RE NEW

EXTENDED APPLICATIONS FOR WELL-KNOWN PRODUCTS

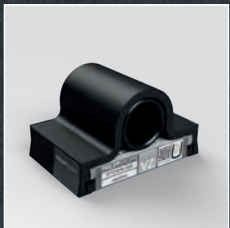

Nailing plate for diagonal tension

When installing the Threaded transport anchor straight version in an angle of 15° the rebar for diagonal tension is not necessary anymore and thus installation mistakes can be avoided. The established steel nailing plate for diagonal tension is completed by a plastic version.

Power Duo System for all (fire) cases

Approvals for the Power Duo have been extended for fire cases and so there is no limit anymore to use Power Duo for different fire protection requirements. Whether with low, fire-retardant or very high requirements, i. e. fire walls, the Power Duo can always be used universally as a complete solution.

Bearing system with noise reduction

Our bearing system with noise reduction is very popular as it can be used in many applications, also or especially for straight or spiral stairs. In combination with different types of threaded anchors and accessories, many applications can be easily covered. The system meets all current requirements for modern buildings and improves impact sound protection with a new elastomer bearing.

TRANSPORT SOLUTIONS SPECIAL APPLICATIONS

Cast-in lifting box

In modern designed precast concrete elements very often only a few space for anchoring is given. Therefore, we developed our Cast-in lifting box with a flexible reinforcement for anchoring. The installation is easy, it can be used without a special lifting device (standard hook possible) and has an outstanding price performance ratio. The lifting box is available in two different dimensions.

Loop anchor with offset

For light, thin-walled and stackable elements we developed a new anchor system. With a deep anchorage as well as a slight offset it fits to very special geometries and allows a direct lifting at the anchor without any lifting device.
